Thu, 19 Apr 2018 15:20:00 GMT generator excitation system arep pdf - Figure 2. Excitation system of synchronous generator Another categorization of excitation systems is made by excitation energy source. Two major classes of this Wed, 18 Apr 2018 23:57:00 GMT Excitation System Models of Synchronous Generator - enable the generator to pick up a motor and drive the voltage recovery. The EBG, while similar in appearance to a permanent magnet generator (PMG) excitation system, is not rated for continuous power output to the AVR and is intended for shorter output situations. During generator start-up, the EBS is switched off to prevent excessive voltage run-up. AREP also provides a sustained short-circuit current for the operation of protective devices. This option requires that the standard self-excited generator is replaced by a generator fitted with auxiliary AREP coils.
